

Khan Academy Summer Math Work for Incoming 5th Grade Students

I am providing summer math work to help the incoming 5th grade students practice math skills they have learned. This will help them transition to 5th grade math, boost their confidence, keep their math skills fresh, move forward and be successful.

I have chosen twenty topics for you to practice. It is best to spread the work out over the summer so if you complete two topics per week you will easily complete all the assignments. Computation practice is key to success. Remember to use scratch paper and not assume this is all mental math. You may go back and redo sections if you do poorly.

The children have been registered in Khan Academy. To log in, the student will go to <https://www.khanacademy.org> - click the sign in/sign up in the upper right corner. They will click the red 'Log in with Google'. Your google id is your lastname.first initial (for example darden.k). This is the same google account information you have been using all year.

You may contact me at kdarden@stjosephgradeschool.com or Mrs. Howard at ahoward@stjosephgradeschool.com if there are any questions. Have fun and enjoy your summer!

Ms. Darden
